

## Bases for Finbrellas in Commercial Environments. A Guide to Selection.

Our most popular commercial sized Finbrella models are the; F-220 (2.2m diameter), F-280 (2.8m diameter) and F-330 (3.3m diameter).

### **Fixed Position units (installation required):**

#### **+ F-220 / 280 / 330 in place on a Fixed 'Stalk' Spigot.**

This has the following advantages:

- Lowest comparative price
- 125mm OD footprint on the floor
- The 'Stalk' spigot has no moving parts so there is no risk of user (staff) error
- Staff and customers don't have the option to move / locate the Finbrellas so it can be optimised and 'set' for your beer garden
- If the 'Stalk' spigot needs to be removed then the 3 x M10 bolts must be unscrewed from the ground

#### **+ F-220 / 280 / 330 in place on a Fixed 'Camlock' Spigot.**

This has the following advantages:

- 125mm OD footprint on the floor
- The Camlock Spigot can be readily removed with a half turn of an 8mm Allan Key leaving only a 125mm OD x 8mm tall (with 4mm bevel) Fixed Camlock Plate (FCLP) fixed to the ground.
- The FCLP poses no trip hazard risk
- Multiple FCLPs can be installed around the venue so the shade can be moved / optimised for events, afternoon sun, etc.

### **Movable units:**

#### **+ F-220 / 280 / 330 on Movable Low Profile Camlock Base (MLPCLB).**

This has the following advantages:

- No installation required. 'ready to go' with a half turn of the 8mm Allan Key required for fastening
- Very readily relocatable by staff and customers
- Low profile bases (12mm) so negligible trip hazard
- Can be transported and used at events, festivals, pop ups, etc

#### **+ F-220 / 280 / 330 on Movable Low Profile Galvanized Steel Base (MLPB).**

This has the following advantages:

- Very similar to the MLPCLB but more cost effective
- No installation required. 'ready to go' with 3 x M10 bolts required for fastening
- Very readily relocatable by staff and customers
- Low profile bases (12mm) so negligible trip hazard
- Can be transported and used at events, festivals, pop ups, etc

#### **+ F-220 / 280 / 330 on Movable Paver Base (MPB):**

This has the following advantages:

- Cost effective 'movable option' ideally for use under tables
- No installation required. 'ready to go'
- Relocatable by staff
- Can be transported and used at events, festivals, pop ups, etc

#### **+ F-330 on Movable Ground Spike Base (MGSB):**

This has the following advantages:

- Most cost effective 'movable option' ideally for soft ground eg; grassed / sandy areas
- Can be transported and used at events, festivals, pop ups, etc
